July 3, 1935

Mr. Arthur Wrigley
60, Pollards Hill South
Norbury, S. W. 16
England

Dear Mr. Wrigley:

Please accept my thanks for your kind letter and the very interesting separates that you sent recently. I am sending you by separate mail two more separates that will give you some information that you may be interested in. The fossil lists in the separate on the Brazos River region are not up-to-date as far as the generic names are concerned but this was not the purpose of the paper. Its chief purpose was to find in which particular horizons the fossils were found.

We would be very much interested to exchange material with you. However, we have about six drawers full of English Eocene species, mostly from Barton. I am interested in any kind of specimen, mollusk or other, Recent or fossil, that has been used as a genotype species for valid genera, for instance, Ostrea edulis and so on. I am also interested in Belosepias with phragmocone or with septa, Pseudolivas, Plagiolophus (crab). I believe the best thing would be if you could send me a list of about 50 specimens so that I could choose from these. I can send you without much trouble about 50 species from the middle Eocene of Texas.

I am very much interested in the method you used to illustrate the fossils in the separate that you sent. Are these pen and ink drawings and just how do you make them? Could you be so kind as to send me a detailed description of your method because I believe the method might be very useful for my future work here.

Very sincerely yours,

H. B. Stenzel, Geologist
