WASHINGTON

January 16, 1929.

Prof. H. B. Stenzel,
Agricultural and Mechanical College of Texas,
College Station, Texas.

Dear Professor Stenzel:

Recently returning to my office, I found your kind letter of last November offering map data for region near Llano *etc*. This material will be highly acceptable and also anything you have relating to Brazos and adjoining counties.

I have no special plans as to rock subdivisions to be represented in the pre-Cambrian crystalline area in the central uplift. I had hoped for two, viz., "Gneiss and schist, etc.," and "Granites and other intrusives," but possibly if we have data, other subdivisions might be shown.

I thank you heartily for your kind offer.

Sincerely yours,

Geologist.
