Dear Dr. Francis:

We have here a manuscript of Dr. B. Coleman Renick's that is going to be printed very soon. In this manuscript Renick lists the Pleistocene vertebrates from Pitts bridge on Brazos River and gives the following list:

Elephas columbi Falconer	Camelops huerfanensis Cragin
E. imperator Leidy	Megatherium mirabile
Mammut americanum	Myloodon sp. indet.
Anancus gratus	Bison latifrons Leidy
Chlamytherium septentrionale	Tetrameryx shuleri
Equus complicatus	Testudo annae Hay

This list is supposed to come from one of O. P. Hay's publications. We have not been able to find the reference. Could you please be so kind as to let me know in which of Hay's publications this list is given? I have added to this list Mammut francisi which is published in a separate article. This latter reference I have been able to find.

I hope that you are doing fine and finding many new fossils.

Very sincerely yours,

H. B. Stenzel

H. B. Stenzel, Geologist
