Dr. Joseph Graham
School of Mineral Sciences
Stanford University
Stanford, California

Dear Joe:

Thanks for your recent letter. It is nice to hear that you are well taken care of. I hope your family likes the place and the apartment.

I am indeed very sorry that we did not get together before you left. The Tertiary field course was quite a success but those A&M boys gave us a lot of trouble. I was very much surprised at their attitude towards learning.

I am enclosing the bibliography which you mentioned in your letter. Unfortunately, I do not have a copy of page 1 right now. There has been too much demand for that page. I am afraid it is not what you really need for your purpose. If you want to review papers in Seminar, a very good subject would be the Vicksburg group, about which much has been published. Look up MacNeil, Garrett, Howe, Cooke, Mellen. It is interesting to hear that you have 70 graduate students. We have 40. The beginning paleontology is being taught here to about 300 students. The man in charge, Keith Young, has his hands full.

With best regards to your family, I am

Sincerely yours,

H. B. Stenzel
