Mrs. Gerry Kienzlen
422 South Morocco Street
Dallas 11, Texas

Dear Mrs. Kienzlen:

Thank you very much for your kind and informative letter. Dr. R. Rezak, another Shell research geologist, and I plan to drive to Grand Prairie on Friday, April 5, evening. He is going to be busy with the U. S. Navy all day Saturday, but will be free Sunday. I am tagging along, because I do not want to drive a car.

We would like to see your collection and could do it Saturday night or Sunday. Possibly we could see the Texcrete clay pit and California Crossing on Sunday. There is some crustacean material that we want to obtain for special study purposes. Personally, I am always interested in all the crustaceans. I shall phone you when I am in Grand Prairie, Saturday in the morning, to make more definite arrangements.

A paleontologist from France has asked me to send him some Texas ammonites. In return he is sending me fossil oysters, which I am studying at present. It would be good if I could obtain some ammonites from the Weno or Pawpaw Formations. These neat small ammonites make very good exchange material.

With best regards.

Sincerely yours,

H. B. Stenzel
