

MEMORANDUM

April 10, 1949

Dear Doc,

How is the Tertiary Stratigraphy class coming this Spring semester? Guess school has you busy along with the Pomeau.

The surface work is still going on over this way. So far we've mapped the Claiborne and part of the Jackson Group. The Jackson proved to be the more interesting work as stratigraphy goes. Looks as if we will also get a crack at the Oligocene before the <sup>surface</sup> program is terminated. We were fortunate to sneak in on a <sup>L.S.H.</sup> field trip lead by Murray just before we started the Jackson. It saved us about a months preliminary work setting up & defining our mapping units. By the way, I have

## MEMORANDUM

a box of Cook Mtn. + Moody's Marl, etc. fossils. Several are from the type localities you sent me. Shall I send them to the Bureau Collect? If you would like some O. trigonalis from the Jackson (Pachuta) <sup>member?</sup> I could easily go back to several good localities + collect some for you.

We really enjoyed the mild winter but we are not looking forward to the heat of the Summer. <sup>Will</sup> Do you have a group of boys in East Texas after school is out? Hope you won't be tied down in the office.

I now have my camera + am in the process of making the rounds of the formation type localities. Will send you your set as soon as ~~can~~ have time to take the remaining two in this section. So far, the results have been...

MEMORANDUM

I have also acquired a projector to show the slides.

Our best personal regards to Mrs. Stenzel + the girls.

Sincerely,  
Q. L. Lytle
