

August 24.1931.

Dear Renick:

Your suggestion of a field trip over here pleases me very much. The college holidays end on September 10. Could you come sometime during September?

There is a place here that is somewhat suspicious. It may or may not be a structure. I have not enough time left to fool with it. Of course this supposed structure will have to remain strictly confidential.

The most important things I might show you here are some excellent sections of the Weches. I believe they are quite important too.

Fossils have not been so plentiful. There is no locality so good as Buck McBrides and Burleson Shell Bluff. However, there is plenty to publish.

There were many errors left in the galley proofs. I did not think that the printing would go so fast. So I was unprepared for some of the corrections.

Cordially yours
