

STATE OF NEW JERSEY
AGRICULTURAL EXPERIMENT STATION
WILLIAM H. MARTIN, DIRECTOR
NEW BRUNSWICK, N. J.

August 14, 1940

Dr. H. B. Stenzel, Geologist
The University of Texas
Austin, Texas

Dear Dr. Stenzel:

Thank you very much for your kind letter of July 30. I am sorry that also you have no news from Knothe.

As to your interest in Tertiary fossils found in New Jersey, I give you the names of those persons at Rutgers University who, I am sure, will gladly cooperate in this matter: Albert O. Hayes, Ph.D., Professor of Geology and Director of the Geological Museum; Helgi Johnson, Ph.D., Assistant Professor of Geology and Paleontology; Anne E. Burgess, Curator of the Geological Museum, and Albert S. Wilk~~in~~son, Ph.D., Instructor in Geology.

It seems to me that Dr. Johnson would be the best man to write to as he is the paleontologist of this University.

I know none of them and I think it would be best not to mention me in writing to them. Maybe I shall be introduced to them soon and I would be very pleased if good neighborly contact is developing between the Geological Department and me. But, as I said, at the time being I know none of them.

I shall be glad to continue to be in contact with you and remain,

Cordially yours,

Erwin R. Biel, Ph.D.
Meteorologist
