Dr. F. E. Turner
Geology Department
A & M College
College Station, Texas

Dear Dr. Turner:

I think your collection from the Weches of Smithville is sufficient. The Goosenek barnacle in that place is Euscalpellum eocenense (Meyer).

The Ricker mound and the Reklaw material will be good. You should have a label printed to put under that Ricker mound. On that label, it should be clearly stated that the material is from F. E. Turner, Geology Department, Texas Agricultural & Mechanical College, College Station, Texas. Personally I would appreciate it if you were to call the beds from which the collection came the Marquez shale member of the Reklaw formation.

To this day, Mr. C. E. Weaver has not arrived. I assume that he found out that there will be field trips after the meeting and decided to stay for those rather than come early.

The prospectus of the card catalog is here, and is it good! A sample is enclosed.

Cordially yours,

H. B. Stenzel, Geologist
