

December 7, 1937

Mr. T. H. Withers
British Museum (Natural History)
South Kensington
London, S.W. 7

My dear Mr. Withers:

By separate mail there is being sent to you for study a package containing two barnable specimens. One is a scutum of another species possibly new from the Weches of Smithville, Texas, Bureau of Economic Geology locality No. 11-T-2. The other is a plate from the Hatchetigbee formation of the Wilcox group at Hatchetigbee, Washington County, Alabama, Bureau of Economic Geology locality No. Ala-22. These specimens have been discovered by me just recently in the course of separating out and identifying of Tertiary collections which I had made sometime ago. I hope this material arrives safely.

Very sincerely yours,

H. B. Stenzel, Geologist
