"Black marble with
many grey & white
flecks" - Boardman

Dear Brice,

My drawing makes the table $.367 \times .213$. Evans' reconstruction of it which incorporates the cast of the Oxford fr. and, apparently, the cast of the Louvre fr. (PM; fig. 465) measures $.355 \times .21$. My $.213$ was reached independently of thoughts that we had a cast of the French piece - so I think it is near enough right. $.042$ is the relevant measurement on the presumed cast. Evans' published drawings are inaccurate, though very attractive. My drawing is still with the photographer.

Best wishes,

John Boardman

Pl. 628 fig. 466 Lichen in situ. → JHS 1897 Fig 25a p. 352

DEPARTMENT OF ANTIQUITIES
ASHMOLEAN MUSEUM

Pl. 628 It is to be observed that the lichen system, beneath about the
segment of the table leg, contained MM distinct strands, some with plant
designs white on dark.

Il est à remarquer que ce fragment de la table, dans lequel on a vu, en second lieu,
ce qu'il est dit s'agit d'un fragment de la table publiée par M. E. (fig. 25a).
D'ailleurs, on ne peut pas en placer au-dessus, parce que la position des

godets connues sur la fig. de M. E. est déjà plus de la moitié des godets entiers. Les
raies, le pied placé à l'angle sur gauche; les godets du milieu, débordés également
sur le godet terminal.
