

April 16, 1928.

District Engineer,
I&GN Rail Roads,
Houston, Texas.

Dear Sir:

This College has introduced a new course of Geology Field Methods which I am teaching this semester. We are surveying an area to the southwest of Wellborn, Brazos County. For this work we are in need of some exactly determined elevations. The bench marks of the I&GN R.R. would serve us well. I am therefore taking the liberty of asking you to kindly inform me as to the exact altitudes and locations of the bench marks 317 and 321 near Wellborn. I may assure you that this work is purely in the interest of education and science and beg to remain

Yours very truly,

HBS:MFO

Dr. H.B. Stensel.
