AND GEOGRAPHY

Dr. H. B. Stenzel  
College Station, Tex.,

My Dear Sir - Have just read your letter of the 4<sup>th</sup> and in reply will say that I shall be pleased to get specimens of Tertiary Scaphopods from Texas, I would like as many localities and horizons as you can supply me with, especially of localities somewhat obscure. I am making a study of the apical portion of Scaphopods, have just finished a series of 250 Dentalium neohexagonum from the Pliocene of California, the details of which will be very interesting when worked up.

For anything you send me I will return species for species - or loc. and specimen for specimen, and as you are not well supplied with Blastoids I will endeavor to send most of that group. Thanking you for your interest, I am,

yours most truly,

Dr. Goeger  
Box 42.
