Dr. Paul S. Galtsoff
United States Fish
and Wildlife Service
Biological Laboratory
Woods Hole, Massachusetts

Dear Dr. Galtsoff:

In the article on "Notes on Shell Morphology, Growth, and Distribution of Ostrea equestris Say" by you and Merrill, it is stated that the northernmost occurrence of the species is halfway between Chesapeake and Delaware Bays (see p. 241). The following geographic location is given: 37°31' N, 37°18' W. There must be a misprint in these figures. Would you care to send me correct figures, please?

Needless to say, the article is highly informative and interesting. I hope to quote it in some of my work.

With best wishes,

Sincerely yours,

H. B. Stenzel
