Miss Josephine Casey  
Bureau of Economic Geology  
University of Texas  
Austin, Texas

Dear Josephine:

At the main entrance to the Geology Building here there are 4 large shrubs, 5 to 10 feet high, of camelias. They are in bloom, deep orange-red balls. There must be about 700 blooms on them.

Could you please see to it that copies of the following papers on brachiopods are sent to Dr. Daniel Pajaud, Geologie Generale/Faculte des Sciences - Sanbonne, 1 Rue Victor-Cousin, Paris V, France:

- (1) Noco Eocene brachiopods from the Gulf and Atlantic Coastal Plain: Univ. Texas Pub. 3945, p. 717-730
  - 9 (2) Brachiopoda: Cards 122-148 from Catalogue of North American Early Tertiary fossils of the Gulf and Atlantic Coastal Plain
- and please put a note with the shipment explaining that the material is by courtesy of the Bureau and of H. B. Stenzel.

I hope you all will enjoy the new building.

Best wishes

Sincerely,

H. B. Stenzel  
Visiting Professor  
Department of Geology

HBS/bjc
