

THE PENNSYLVANIA STATE COLLEGE

SCHOOL OF MINERAL INDUSTRIES

STATE COLLEGE, PENNSYLVANIA

DEPARTMENT OF
PETROLEUM AND NATURAL GAS ENGINEERING

Dec. 19, 1935.

Dr. H. B. Stenzel,
Bureau of Economic Geology,
University of Texas,
Austin, Texas.

Dear Dr. Stenzel:

Merry Christmas, and what not!

Well, after all these many years I see that your Aturia paper finally appeared. Was that the paper they had for two years and didn't even say it had been received? It seems a little unfortunate that Miller also revised the genus Aturia in the same issue. Do the revisions overlap or conflict in any way? I didn't know anything about the genus and haven't been able to find time to study the papers very much.

Dr. Landsberg, who teaches geophysics here, and Dr. Fuchs in Fuel Technology both got their training in Germany, so I'm getting some of the new German stamp issues, as well as getting acquainted with some fine fellows. Perhaps that should have been written in the reverse order.

Where is George Harris? I haven't heard from him since last summer.

Ruth is taking some courses in music education and is kept pretty busy, but she seems happy, so why should I worry about how hard she works? Ruth is hurrying me. She wants to go, so I'll have to finish this up. I'll write again when I have more time.

Sincerely yours,

Ralph H. King
Ralph H. King.
