

TEXAS STATE BOARD OF WATER ENGINEERS

Prepared in cooperation with the
United States Department of Interior, Geological Survey
and the City of Galveston

GALVESTON COUNTY, TEXAS

Records of wells, drillers and electrical logs, water level measurements,
water analyses, and map showing location of wells

By
B. A. Barnes

October 1941

GALVESTON COUNTY, TEXAS

Introduction
by
B. A. Barnes, Engineer
Texas State Board of Water Engineers

This release contains a description of 726 wells in Galveston County, Texas, including the location, depth and size of the wells, the depth to which the wells are cased, the depth to the water level on given dates, the method used in lifting the water, and the use that is made of the water. It contains logs of 86 of the wells, 574 analyses or partial analyses of water from them, and a map which shows all the wells described, each well having a number on the map corresponding to the number assigned to it in the tables of records. The publication also contains a supplementary table of chemical analyses of water from wells that are not listed in the tables of well records nor shown on the map, but are closely adjacent to the recorded wells.

Some of the records were obtained in 1931 and 1932 by Penn Livingston and S. F. Turner in the course of an investigation of the Houston-Galveston area which was undertaken by the State Board of Water Engineers in cooperation with the Geological Survey of the United States Department of the Interior, as part of a state-wide study of the underground water resources of Texas. The remaining records were obtained during 1939 to 1941 by B. A. Barnes, with the assistance of H. M. Stellman, Jr., in connection with an intensive study of the underground water resources of the county by the Federal Geological Survey in cooperation with the Texas Board of Water Engineers and the City of Galveston. Most of the chemical analyses were made by E. W. Lohr of the United States Geological Survey.

The records obtained in 1931 and 1932 were published in mimeographed form in April 1939, and are included in this publication.

The tabulated data include information obtained by Singley 1/ and Deussen 2/ and information on file in the office of the City Engineer of Galveston.
