Box 696. Giddings Texas
May 22, 1931

Dear Stenzel:

Received your Paleontology chart today and forwarded it to Houston tonight.

Please see that your additions to the text of the report ~~received~~ reach me in fairly good form here at Giddings not later than Wednesday or in Houston ^{May 29} by Thursday. If you prefer send them to Houston. I wish to leave the manuscript in Houston with full instructions for typing before I leave on my vacation so that Mr. Sellards will receive it by the first week in June so he can right down and get it in.

The corrections that you suggested had already been made except regarding Indio which I am not using & except putting ~~Claiborne~~ ^(in text) in upper Mygona in upper Claiborne which I have done if you are sure that it is O.K. I suggest that you mention some of the forms found in the marine Mygona in Berleson Co. as I have described these beds in the text.

Also I am abandoning Benchley as I do not think this a good type place. Am using Robertson for present

VACUUM OIL COMPANY
NIELS ESPERSON BUILDING
HOUSTON, TEXAS

but I should like to use little Brazos if it were
permissible. Am writing to Surney in regard to this.

Shiloh is in use so have substituted ~~Canton~~ Caton
in place. You did not want Wheelock and Caton
is the only other nearby place.

Best regards. in haste,
Pernick.
