Dr.H.B. Stenzel
University of Texas,
Bureau Economic Geology,
Box B, Univ.Station
Austin 12, Texas

Dear Dr. Stenzel:

Under separate cover I am returning the set of specimens you sent in for determination. There are three lots of fresh-water specimens and one of land material. Because of the interest in this series and for preserving the records here I have taken the liberty to take a sample from each lot sent. I hope this will meet with your approval.

A series of Amnicola which is much like what we call integra was of considerable interest. It extends the range considerably south and somewhat surprises me. We have someone making a serious study of the Amnicolids of the south and when it is convenient I shall plan to discuss this set of specimens with him. When he finishes his intensive study he should be in a better position to appraise the extension as this material you have sent indicates.

I hope the box being forwarded reached you in good condition. With best wishes, I remain,

Very truly yours,

Henry van der Schalie
