Patterns of Conversation

South Asia in general, and India specifically, are regions with immense diversity in culture and language. Because of this conversations about medicine between doctors and patients takes different forms from one region to another. This is especially true when we look at urban, suburban and rural doctor-patient interactions. Added to these is the element of gender. Owing to the somewhat conservative worldview of gender interactions, even doctor-patients conversations might become colored by it. The clips in this section show variations of patterns of conversation in the practice of conventional medicine.

DOCTOR-PATIENT INTERACTIONS DURING CHECK UP - PART TWO
