Silver Tongues Mean Silvered Pockets in U.T.

More Than \$750 Given Each Year in Forensics

Contests Begin In February

More prizes are offered annually by the department of public speaking in the University than the total number offered by all other branches of interest combined, it was pointed out Saturday. Of these, the Wroe prize contest in oratory will be the first to be given during the spring semester, the contest date being set for February 28. Preliminaries for the Wroe contest will be held February 17.

The Wroe prize is donated annually by H. A. Wroe of Austin, and is divided among the three highest ranking speakers. The total of the prize is \$100, and it is divided into a first prize of \$50, a second prize of \$30, and a third prize of \$20.

Wilmot Prize for Frosh

February 23 is the final date of entry for the Wilmot prize in freshman declamation. The final preliminaries will be held February 28, and the finals of the contest March 6. The Wilmot prize, which is given annually by Mrs. S. B. Roberdeau of Austin, consists of \$50, which is equally divided, one for men and one for women. In addition to the cash prizes, the University Co-Operative Society offers to winners of second places in both men's and women's contests \$15 worth of books.

The Houston Post-Dispatch offers a prize for extempore speaking in this year which is open to all undergraduates, both men and women, who have not won first place in the contest in previous years. The first preliminaries of this contest will be held March 23, and the final contest and awarding of the prize will be March 28.

Stark Debate Prize

The Luther Stark debate prize, given annually by H. J. Luther Stark, chairman of the Board of Regents, is divided into three prizes of \$100, \$75, and \$50. These prizes are open only to members of the varsity debate squad.

A prize of \$100 is given annually to the winner of the Battle of Flowers prize which is conducted on the campus. The prize is given by the Battle of Flowers Association of San Antonio through its president, Mrs. Alfred Pierce Ward, and is given for the best oration on a subject suitable for a San Jacinto Day program. Under the terms of the contest, the winner of the prize must make his or her oration in San Antonio at a dinner given on San Jacinto Day.

Intersociety Prizes

The intersociety debating prizes, which have already been awarded for this year, consist of the Wroe Cup, valued at \$160, which was won by the Athenaeum Literary society in a recent contest, and the Carl Mayer prize, a gold watch given to the best speaker of the team winning the Wroe trophy.

A prize administered through the public speaking department, but which is not a public speaking prize, is the W. J. Bryan essay award. This prize consists of the interest on a fund of about \$400, offered for the best essay submitted on good government. The essays are judged by a committee of three members who are appointed by the president of the University.

Five Sections Open to Freshmen In Public Speaking Next Semester

Several courses will be open to students wishing to start public speaking or to add courses in the department of public speaking the second semester, according to Ellwood Griscom, Jr., chairman of the department of public speaking.

Five sections of the principles of speech, Public Speaking 205, will be open to freshman students. Three sections of Public Speaking

McCormack Here February 6

JOHN MCCORMACK, world famous Irish tenor, will sing in Austin, February 6 at the University Men's Gym. This is his first concert in Austin in two years.

McCormack is being brought to Austin under the auspices of the Amateur Choral Club and under the direction of D. F. McSweeney of New York. This visit will make the third appearance of the tenor in this city and will mark the beginning of a number of such concerts being sponsored by the Club to be given in Austin. His program for the concert has not yet been definitely announced.

Four Engineers Selected to Do Research Work

Appointed For Two Year Terms By Western Electric

Four of the 36 research workers selected by the Western Electric Company of Pittsburgh, Pennsylvania, from the "Class A" schools of the United States, were selected yesterday from the University of Texas by Dr. Roberts, head of the Education Department of Western Electric. Those selected were H. L. Land of Santa Anna, M. J. Hangartner of Henrietta, F. C. Rushing of Runge, and J. H. Watts of Austin, all seniors in the mechanical engineering department of the University.

Men Selected Yearly

The men are appointed for two years, and will take up the work in September of this year, doing regular research work on mechanical engineering equipment made by the company. Each year Western Electric selects men for this and other work from a list of the leading students in the "Class A" schools of the country. "To have obtained four of the 36 appointments is a distinct honor for the University of Texas," stated Hal C. Weaver, professor of mechanical engineering.

SEVEN STUDENTS RECEIVE DEGREES FROM C. I. A.

Special to The Daily Texan. DENTON, Texas, Jan. 28.—Seven students at the College of Industrial Arts will complete work on their degrees at the end of the first semester. Of these seven, three will receive B.A. degrees: Mary Jane Sherwood of Childress, Elsie Adele Perry of Wills Point, both of whom have a mathematics major, and Lou Annie Stratton of Freeport, who has an English major.

Club Promotes Intercollegiate Co-Ed Debating

Will Depend Largely On Freshmen Women Aspirants

"Intercollegiate debating for women should be an established fact in the University of Texas by next year," according to Rae Logsdon, president of the Versus club. "It will be if all the girls on the campus who are interested in public speaking will get behind the Versus club and do their share of work," she added.

Publicity Campaign

Beginning Monday, February 6, the Versus club will begin a big publicity campaign, which is to reach every freshman girl on the campus. This is for the purpose of arousing interest in public speaking among the girls.

"The freshmen girls are the only ones that can put intercollegiate debating over now, for they can make the right start along that line before it is too late," said the president.

Offer Prize

Not only will Versus club begin a publicity campaign, but right after examinations are over it is going to get a prize offered for the best woman debater on the campus. The rules, judges, and subjects for the debate have not been decided upon yet, but the club expects to arrange this in the near future.

Versus club will hold its first meeting of the new term Friday February 3 in the Texas Bible Chair at 5 o'clock for the purpose of discussing these and other plans for the term, and all members are urged to be present, according to the president.

Pastor's School Meets in June

Special to The Daily Texan. GEORGETOWN, Texas, Jan. 28.—June 5 to 15 was set at the date for the Pastor's School to be held at Southwestern University this summer by the board of managers in a meeting held here recently at the call of President J. Sam Barcus.

A variety of courses for graduate work will be given this year in addition to the regular undergraduate studies, and work leading to diplomas in Sunday school courses will be offered. Some of the most noted lecturers of the Methodist church are to speak during the school session.

Second Semester Registration Will Start Wednesday

New Students Sign Up Feb. 1; Old Students Report Thursday

Old Thirds Count As Prerequisites

Registration for the second semester begins Wednesday, February 1. New students, transfers, and former students applying for entrance in the University will sign up the first day. All old students will report present Thursday, February 2. Final examinations of the first semester will be completed Tuesday and classes will be resumed for the new term on Thursday.

In outlining prerequisites and degree requirements, it has been

Cards for all old students reporting present as required must be filled out in person, according to E. J. Mathews, registrar. These cards will be available as follows: for business administration students, B. Hall 107; for engineers, Engineering Building 109; for law students, Law Building 106; for pharmacy students, V Hall 1; for all other women students, Main Building 111; and for all other men students, the reading room of the Main Library.

pointed out that students who have done an independent one-third part of a prerequisite course or a degree requirement consisting of a one-third course and a two-thirds course and finding the remaining two-thirds now expressed as a one-half course (three semester hours) will be regarded, upon completion of the half, as having met the requirements, but they will, of course, receive credit only for the actual number of semester hours completed, the officials state.

Thirds of courses completed under the old system that have now been made into half-courses may be offered as prerequisites in lieu of the respective half-courses. For example, Philosophy 103 (now

(Continued on page 3)

Owls Topple Bears 37-27 to Spill Dope

HOUSTON, Jan. 28.—Trailing 11-15 at the end of the first half, the Rice Owls Saturday night fought an inspired battle in the second half and whipped the Baylor Bruins 37-27. Captain Hank Grant and Dave Zuber led the attack of the winners each registering six field goals. Captain Strickland scored four times from the floor for Baylor and Slade counted five field goals. Kendrick starred on the defense for the Owls.

Rice pulled the unexpected last night when they turned the tables on the Bears and trounced them 37-27 after they were trailing 11 to 15 at the half. The Owls staged a terrific fighting comeback and led by Captain Grant and Zuber, they gradually pulled up and then passed the scrapping Bears to finally win in a sensational whirlwind finish by a 37-27 score. This was the same score by which Texas trounced the Owls here.

This defeat at the hands of the lowly Owls will send the Bears to Austin Monday fighting mad, and Texas may look for a hard fight from the Bears.

Public Speaking Studes Offered \$5,000 in Prizes

Nation - Wide Oratorical Contest to Be In Los Angeles

University students interested in public speaking will have their chance to win a share of \$5,000 in prizes being offered by the Better America Federation of California, according to Thomas A. Rousseau of the public speaking department. The prizes will be awarded at the finals of the fourth national intercollegiate oratorical contest on the Constitution, held at Los Angeles in June.

U. S. Divided Into Districts

For purposes of the contest, the United States has been divided into seven districts by the federation, and schools in each district enter into contests to see who will represent the district in Los Angeles. Each college in each district must hold preliminary contests to determine who will enter the regional preliminaries. Winners of the latter preliminaries, numbering seven, will enter the final contest in Los Angeles. Since there will be seven speakers in the finals, and the \$5,000 is to be divided into seven prizes, each one of the representatives of the major regions is assured a prize. First prize is \$1,500; second prize, \$1,000; third prize, \$750; fourth prize, \$550; fifth prize, \$450; sixth prize, \$400; and seventh prize, \$350.

Students desiring more information may see Mr. Rousseau in S Hall.

Longhorns Meet Baylor Bruins Monday Night

The Baylor Bears will invade the Longhorn corral Monday night fresh from their 37-27 licking at the hands of the Rice Owls at Houston Saturday night. Texas completed her preparations for the romping Bears Saturday afternoon when the squad went through at fast workout on the Men's gym floor, in which the entire squad participated in the highest of spirits.

This will be the fifth conference game of the year for Texas, and the game promises to be hard fought from the first whistle to the last shot. Baylor has lost one game this year, and at the present seems to be one of the leading contenders for the conference leadership.

Baylor Upsets Bucket

They were doped to be the weak sister of the conference this year, but it appears as though Coach Wolfe has pulled one of his favorite tricks and put a team in the

(Continued on page 3)

Exes Nominate Executives For 1928-29 Monday

T. W. Gregory's Term As President Expires This Year

Discuss Success Of Drive

The Executive Council of the Ex-Students' Association will meet Monday, January 30, at 10 o'clock in their business offices for the purpose of discussing the progress already made upon the Union project and to consider further plans for the drive which is to be made in the near future.

Officers and committee members for the year 1928-29 will also be nominated at this meeting. Since the fiscal year of the association follows the school year, the new officers will be installed June 1.

Gregory's Term Over

A successor to Hon. Thomas W. Gregory of Houston who has been president for the past two years will have to be nominated because of the constitutional provision that presidents may serve only two years.

However, it is predicted that Mr. Gregory will remain official chairman of the Union campaign until it is carried through, according to John A. McCurdy, secretary of the Ex-Students' Association.

Committee Officers

Present officers of the Executive Committee are: T. W. Gregory of Houston, president; Mrs. Dan Moody, Austin, first vice-president; Mrs. Fannie Prather Davis of Waco, second vice-president; Robert Lee Bobbitt, former speaker of the House of Representatives of the state legislature, third vice-president; and C. M. Bartholomew, vice-president of the Austin National Bank, treasurer.

Council Members

Active members of the council are: Mrs. Mary Batts Aldridge of Dallas, Herbert Davenport of Brownsville, A. B. Flannery of Dallas, James Marley of Fort Worth, W. E. Orgain of Beaumont, Joseph A. Wortham of Dallas, Stephen L. Pinckney of Houston, John A. Lomax of Dallas.

Medical members of the council are: Dr. A. O. Singleton of Galveston, Dr. H. R. Dudgeon of Waco, and Dr. James Greenwood of Houston.

Ex-Officio members of the council are: H. B. Ardrey of Dallas, Dexter Hamilton of Dallas, Will C. Hogg of Houston, Orville Bullington of Wichita Falls, D. C. Bland of Orange, Rhodes S. Baker of Dallas.

T.C.U. Letter Men Plan Home-Coming

Special to The Daily Texan. FORT WORTH, Jan. 28.—The "T" Association, a society of men who have made letters in athletics at Texas Christian University, is planning a "home-coming get-together" banquet to be held in May.

This banquet, according to Raymond Matthews, this year's "T" president, will be made an unusual affair, the purpose being to keep the athletes in touch with one another and to promote good fellowship. All alumni lettermen will be invited, and from indications the school on the hill will be the mecca for many Purple Illuminaries of past years.

New Practice House At Tech Completed

Special to The Daily Texan. LUBBOCK, Texas, January 28.—The home economics practice house of the home economics school of Texas Technological college has been completed and will be occupied within a few days. The building and furnishing cost about \$25,000. It is one of the most beautiful structures on the Tech campus, being of the prevailing gray brick and Spanish design. It has the appearance of a fine two-story Spanish house.

Uncle Billy Calls Meeting of All Men Wishing Berths on Steer Nine

Blanket Taxes Exchanged Feb. 2

Old Tickets Not Good For Admittance

Students must turn in their old blanket taxes and get those for the coming term at the University Co-Op Thursday, February 2, according to Ed Rather, manager.

No one will be admitted to any of the baseball games or any of the other athletic contests to be held during the spring term unless they exchange their tickets. The new blanket taxes will be of a different color from those of the past semester so that they may be easily recognized when taken up at the gates.

C. I. A. CLASS PRESENTS PORTRAIT OF MISS HEFLEY

Special to The Daily Texan. DENTON, Texas, Jan. 26.—A portrait of Miss Estella G. Hefley, dean of women at the College of Industrial Arts was recently presented to the college by members of the class of 1926. The portrait was placed in the Bralley Memorial Library.

F. W. Wright, a New York artist, was commissioned to do the painting. He worked without a personal interview with the subject, using fourteen different photographs of the dean.

HOWARD VISITS CAMPUS

M. J. Howard, former student, who is employed this year as a member of the Gilmer high school faculty, visited friends on the campus over the mid-week. He was a guest while here of Cecil Ball. Howard plans to continue his work in the University next year.

Passing of Last Year's Stars Leaves Many Vacancies

Faced with the tasks of building a pitching staff, now that Neal Baker has gone, finding two outfielders to fill the holes left when Cy Williams and Dutch Baumgarten finished their years of eligibility, and of plugging the gaps at short and second by the passing of Edwin Olle and Bobby Harris to higher company, Uncle Billy will call his proteges together for their practice of the 1928 season Wednesday afternoon at 2 o'clock. At that time Coach Disch wishes that every man going out for baseball be on the field in uniform.

Monday and Tuesday will be spent by the supply room delivering equipment and assigning lockers to all those eligible for Varsity.

Pitchers Needed

With the loss of Baker, Texas lost one of the best pitchers ever to toe the rubber on a mound in the Southwest conference, and to fill his shoes will be the mark set for some enterprising and hustling young pitcher.

Uncle Billy will have ten pit-

(Continued on Page 4)

Co-Ed Building Closes in June

Repair Work Starts On Campus Dormitory Next Summer

The Woman's Building dormitory at the University will be closed during the entire summer session of the University to allow for repairing and remodeling the interior of the building, according to J. W. Calhoun, comptroller of the University.

The students who are writing for room reservations in the Woman's Building will be accommodated in the new Alice P. Littlefield Dormitory, Miss Ruby Terrill, dean of University women, stated. The new dormitory contains sufficient rooms to take care of 150 women students, and although it is used exclusively for freshmen women during the long session of the University, it will be used for upperclass women as well during the summer sessions, Miss Terrill said. It is the plan of the University authorities to keep both of these dormitories open during the summer session hereafter, Miss Terrill stated.

Will Complete Clark Field Stands In Time For Season's First Game

Excavations for the foundations for the new Clark Field stands are being dug. Workmen began this week the task of having them completed in time for the first game, March 24, with the Detroit Tigers.

James T. Taylor of Fort Worth, who is just completing the new

GRETA GARBO and ANTONIO MORENO in "THE TEMPTRESS"

The College Widow

Miss Costello's beauty has won her a number of roles, some to which she was suited and some out of line. But she has been most happily cast in lighter parts of which "The College Widow" is typical.

It will be shown at the Texas on Monday and Tuesday.

H. S.

ture, he also wrote his own titles.

The all-star supporting cast for Mr. Rogers is headed by Louise Fazenda as "Ma" Brander, his wife; Bossy, the daughter, is Ann Rork; Douglas Fairbanks, Jr. is the dude sweetheart, and George Marion, Sr., the original Fish-back, negro politician, as Minister to Dahomey, has the screen characterization. Others in featured roles are Lilyan Tashman, Mack Swain, Lucian Littlefield, William Orlamond, Arthur Hoyt, and Bud Jaimison.

Richard Wallace, who made "McFadden's Flats" as a comedy triumph for First National, directed "A Texas Steer."

—H. S.

Vaudeville

The Mound City Blue Blowers famed for their syncopated melodies and through their recordings on phonographic discs, are the featured attraction at the Hancock theater this week, heading a program of six vaudeville acts and a feature picture. The Mound City Blue Blowers get their melodies out of almost any sort of contrivance in addition to being capable musicians on the regular instruments. Combs, buckets, kazoos, pieces of paper and other things are used to get melody and harmony and all of it in jazzy rhythm. Sonia Meroff, who has been featured with the Herman Timberg unit shows, here during the past two seasons, returns with the Mound City Blue Blowers. Miss Meroff does several snappy song numbers with the syncopators.

Frank Conville, a newcomer in vaudeville, also has a featured spot on the program. Conville does a lot of comedy chatter in his act and dances a bit. He also entertains with impressions of various famous folk of the stage and screen.

Joe Mack and Gail Rossiter, remembered from two seasons ago, return with their act of chatter and dance. The comedy angle creeps into their dance and talk numbers.

Harry Shuffles Levan with his company presents "The Modiste

brought to the Hancock in several years, and is coming here after a sensational run in New York.

reached the screen with Will Rogers in the role of the Texas cattleman elected to Congress against his wishes.

The photoplay, a comedy special produced by Sam E. Rork for First National Pictures, as the outstanding laugh of the year, will

be shown at the Queen theater beginning Sunday.

While Rogers is in a natural role as a Congressman after having kidded Congress so many years, none of the cowboy-humorist's rare humor is missed even in the subtitles. A star of the pic-

ture, he also wrote his own titles.

The photoplay is excellent, particularly the rain scenes. The sets look authentically unkempt, as do the natives, the hotel keeper of Pago Pago, and his wife, Ameena.

Shop," a musical comedy idea with song dances and comedy. Levan does the comedy roles and also entertains with his shuffle dance numbers. Dorothy Lull has the featured spot of the dancing chorus with the act. Andy White takes care of most of the vocal numbers.

Herberta Beeson opens the show with a novelty wire act.

Other Peoples' Business

The Orpheum Players returned to Austin after a successful five days at Waco with the optimistic play, "Other Peoples' Business" (author's name not given in program). A large and appreciative audience laughed through the comedy—not because the play is exceptionally funny but because

the actors make the most of their roles.

The author gave the play to the Babbitt-father. This part was played by Robert Stone, who rendered the most distinguished performance of the day. But he has proved his ability before in several excellent interpretations, and a failure from him would have been very disappointing.

Stone is well supported by Don Woods, who gets away with some good business but is not quite as convincing as he usually he, and by Forrest Barnes, who now resumes his usual role as the juvenile of the play and well acquits himself.

The female parts are negligible, but what was given them was well played by Norma Leach, Nancy Fair, and Jeanne Houghton.

Varsity Again Aspires To Track Leadership

Squad Has Good Margin in Most Track Contests

Good Material and Many Old Champions Add Assurance

With over 130 men, including freshmen, out for track, Coach Littlefield has one of the largest squads that has ever been out for that sport at the University. Among this number are to be found some of the best athletes in the entire country, including one national intercollegiate champion, four conference champions, and numerous interscholastic league champions. With this amount of material and a large number of champions to choose from, there are hopes for Coach Littlefield's men repeating their victories of the past few years. They have won the conference championship for the past five years and are given the edge for the top rung this year.

Handicapped in Distances

Texas will again be handicapped in the distance races this year, as she will have no men capable of measuring up to the standard set by the Rice and Aggie men who make a specialty of the longer races. In the dashes and weight events, Texas will be more than able to hold her own. Landa and Baggett are two of the fastest men in the conference. Landa is an old man, running his last year for Texas. Windrow is another dash man.

Quarter and Half Mile

Dan Daniels, who ran the quarter mile in 49-2 last year is one of the most promising quarter milers in the south, and much is expected of Daniels this year. Parker of A. & M. was the only man to beat Daniels to the tape last year, and it will take a fast runner to beat him this year. Terrell, Harris, Vestal and Dickerson are all running Daniels good races in the daily workouts on the Memorial track.

In the half mile there are White, Jones, Arnold, and Wright, who are all fast rounding into shape. If these men come around as they should, Texas should have little trouble placing in this event.

Ralph Hammonds, conference champion in the pole vault, is rapidly approaching the form which carried him to the championship last year. Courter is going over the 12 foot mark constantly, and Wolfe and Sandberg are rapidly

SOUTHWEST CONFERENCE STANDINGS				
Team	P	W	L	Pct.
S. M. U.	5	5	0	1.000
Arkansas	4	4	0	1.000
Baylor	3	2	1	.666
Texas U.	4	1	3	.250
Texas A. & M.	4	1	3	.250
T. C. U.	5	1	4	.200
Rice	5	1	4	.200

CONFERENCE GAMES THIS WEEK

Monday: Baylor vs. Texas at Austin; Rice vs. Texas A. & M. at College Station.

Wednesday: Texas vs. Rice at Houston.

Friday: Arkansas vs. Baylor at Waco. Saturday: A. & M. vs. Texas at Austin; Arkansas vs. Baylor at Waco; S. M. U. vs. T. C. U. at Fort Worth.

approaching the 12 foot mark.

Shot-put and Discus

Leo Baldwin, who holds the conference championship in the shot-put, has returned to the Texas track team, and is putting the shot farther each day. Hargis who upheld the Steer supremacy in that event last year is running Big Leo a close race for honors in practice. In the discus Baldwin and Bayer are both trying to equal the distance reached by Tiny Gooch last year. At present Baldwin is getting the best distance, but Bayer is getting better all the time. In the javelin Captain C. B. Smith, Reynolds and Gallaway are ready to uphold Texas' prestige. Smith, conference champion in the broad jump, is being aided in that sport by Shepherd and Preston, who are stretching out farther each day.

High Jump

Two champions are vying each other in the high jump. Garland Shepherd, southwest conference champion, and Rufus Haggard, national intercollegiate champion are taking turns about besting each other. Shepherd won the conference championship last year, while Haggard won the intercollegiate championship year before last.

Blanton, Roper, White, Conaway, Ward and Mondrick are out for the distance runs, and are rapidly developing into fast men in the races, and if they come around before time of the opening of the track schedule there is a chance for Texas to win the conference championship again.

17 Frosh Work With Aggie Team

Coach Higginbotham Has Good Material

Special to The Daily Texan. COLLEGE STATION, Texas, Jan. 28—Seventeen men from the squad of more than sixty who

first reported as candidates for the Texas Aggie freshman cage team of 1927-28 are working out daily under the direction of Freshman Coach R. G. Higginbotham and much promising material for varsity teams of coming years is being developed. S. J. (Punk) Baker, captain and star of the 1296-27 Texas Aggie varsity quintet, is assisting in the training.

As in football, the freshman squad is used to scrimmage with the varsity, but, in addition, the "fish" team will meet quintets from several of the high schools of the state. Definite announcement of the schedule has not yet been made but negotiations are under way for games with Bryan, Houston, Austin and Waco teams.

For the forward positions Coach Higginbotham has R. D. Hardcastle, Houston Heights high school; H. U. Bible, Jefferson City, Tennessee; H. B. Cox, Houston Central high; W. G. Cotton, Beaumont high; R. B. Jones, Leesville, Louisiana; E. K. Martin, Palestine high. Hardcastle won statewide recognition during his two years at Houston Heights and is one of the outstanding candidates for the team.

Bible, a brother of Head Coach Dana X. Bible, played three years with the Jefferson City, Missouri, high school, and seems to be better in basketball than he was in football, in which he won his freshman numeral the past season. Cotton was a letterman at Beaumont high school three years and is a fleet-footed forward of ability. Besides one year as a letterman with Palestine high school, Martin received two letters in basketball from Randolph Junior College. Jones is a three-year-man from Leesville, La., and Cox received a letter from Houston Central high.

It is with material for the center positions that the freshman

squad is particularly favored. C. T. Coke, all state center from Houston Heights high school; H. McKinney high; W. P. Russell, who D. Phillips, three-year-man from was awarded two letter at Brackenridge high school; R. C. Bell, four-year-man at Bellville; A. M. Denton high school, and H. E. Allison, forward and center from Thompson, Hereford boy with three years experience at guard-center, form as promising an array of material from which to select a center as could be desired.

R. T. Lamb, another Houston Heights high school product with two years' experience; H. C. Skaggs, two-year-man from Fort Worth; E. J. Smith, with three years' experience with Port Arthur; F. Broiles, another Fort Worth boy, who has three letters to show for his high school experience, and J. A. Cotton, one-year-man from Abilene, compose the list of candidates from which the guards will be chosen.

Competition has been kept at a high pitch since practice began in December and the fact that the seventeen men now on the freshman squad were chosen from more than sixty, all of whom had experience, either high school or academy, speaks well for their ability.

C.I.A. Changes Summer School

Length of Session Cut To Nine Weeks

Special to The Daily Texan.

DENTON, Texas, January 28—An innovation in summer school instruction will be offered at the College of Industrial Arts next summer in the form of a nine week session that will open Tuesday, June 5, and close Tuesday, August 7. The C. I. A. summer system heretofore has consisted of twelve weeks divided into two six-week periods. The same amount of instruction, equaling one semester, will be offered during the nine-week period as was formerly given during the twelve weeks.

The new summer session will be divided into a long and a short term, the short term to continue for three weeks. Following the long term and will be designed to meet the needs of students lack-

ing a few necessary credits in certain courses.

There will be a 50 per cent increase in the number of courses and faculty members during the coming summer session, according to L. H. Hubbard, president of the college. The regular five day a week schedule, started last summer, will be followed during the coming session. Sunday and Monday are holidays under the summer system.

Second Semester—

(Continued from page 1)

315) completed under the old system, will be regarded as meeting any requirement calling for Philosophy 315.

Courses are designated by numbers which indicate both rank and value in semester hours. A number between 200 and 299 indicates a value of two semester hours, one between 300 and 399 a value of three semester hours, etc., except that when the value is six semester hours the numbers between 600 and 699 are used, instead of numbers between 600 and 699. The two digits on the right indicate the rank of the course; if between 0 and 9 the course is of freshman rank, if between 10 and 19, of sophomore rank, if between 20 and 59, of junior rank, if between 60 and 79 of senior rank, if between 80 and 99, of graduate rank. Students registering the second

semester are required to pay one-half of the amount required for the full session, applied on the scale of courses basis.

Longhorns Meet—

(Continued From Page 1)

field that, so far this year, has proven to be a sensation in the conference. They number among their conference wins one over Rice and one over the T. C. U. Frogs. The Frogs were supposed to have one of the strongest quintets in the race and the Bears trounced them rather soundly.

Texas Inconsistent

Texas has been playing games that border on the sensational at times, only to drop off into mediocre playing in the next game. Their scoring attack has not been as consistent as might be desired for the best results. In the last games their teamwork has been better, but at times they have fallen off, and the opposing team

has been able to run rings around them. In the Southwestern game they were terribly off form in the first few minutes of play; but they got better as the game wore on, and when the final gun was fired they were going at top speed.

Four Teams Play

Monday night will find four of the conference teams in action. Baylor will be in a death struggle with the Longhorns here while the Owls will be striving at College Station to gain revenge for a defeat handed them earlier in the year at Houston by the Aggies. The Aggies should win the game without much trouble, but then Daugherty has a powerful team in the race, as is evidenced by the trouble the rest of the conference members have had in downing them.

The leading Horses and Hogs will not be seen in action again until February 4 when the former meets T. C. U. in Fort Worth. On that night the Razorbacks will be

engaged in the last of a two-game series with the Baylor Bears at Waco. The first game will be played Friday night, February 3. The Ponies and Hogs should come through with easy wins in both of these clashes and will be left tied for the leadership.

Championship Games

The two best games of the year will be played at Fayetteville on February 10 and 11 when the Hogs and Ponies clash in a two-game series. The winner of this series should, and more than likely will, win the Southwestern conference championship. The Hogs are after their third consecutive flag. Year before last they lost only one game, and that was to T. C. U. Last year they lost two games, both of them to Texas.

This year saw two new coaches come into the conference, and both of their teams have made a late but flying start, and at the present seem to measure up with the best of them. These two teams are Texas and Rice.

HAROLD TEEN—THEY SURE DO BUILD ONE UP

\$500,000 Power Plant Embodies Engineer Genius Memoirs

Tablet Ornaments Show Mechanical Progress of Years

Since the time when man could turn his attention from the pursuit of quarry and defense of life to ruminating on the forces of nature, he has striven toward the attainment of a Utopia where his work of providing the comforts of life would be done by a mechanical man. With this aim in view, he has in successive and arduous stages constructed marvelous devices to put those forces to work, and has established laboratories and universities to find out new uses and new adaptations of them.

Nearing completion at the University is a plant that embodies the combined discoveries and ingenuity of ages of such development. It is the new \$500,000 power plant.

The Lady Grows
The University of Texas will celebrate its Golden Anniversary in 1933. Those who attend the celebration will marvel at the great strides taken by their Alma Mater—strides that are becoming leaps and bounds. The habitude of the Forty Acres are so accustomed to the sensation of progress that it attracts little more than passing notice. To them it is the natural gait of a robust dame.

But records of registration show that every ten years since its doors swung open in September, 1883, the University has doubled in enrollment. The increase has been steady and unaccompanied by ballyhoo. The trend toward higher education since the war has caused an enormous growth of institutions and facilities to meet the demands of students.

The year 1927-28 is an important one in the history of the University. For the first time its initial enrollment passed the 5,000 mark.

Dreams Come True.
If plans of the building committee materialize, the alumni who gather to celebrate its 50 years of educational service will scarcely recognize the enlarged campus, the great library, the new laboratories and recitation halls as belonging to the same school in which they gathered to absorb the great truths. Working with the committee in a different direction the Ex-Students' Association is fostering a drive for funds with which to build accommodations for the social phases of the University, to be housed in the proposed student union group.

They propose to erect a new gymnasium and auditorium unit and two other buildings to care for women's athletics and social and cultural gatherings. Their funds are to be added to by the Board of Regents of the University which will swell the total to about \$1,000,000.

Ever since its founding the University has been embarrassed by a lack of funds to provide for the housing and equipment of its various units to keep pace with its growth in enrollment. In establishing it, the Legislature endowed the University with great tracts of public lands. The endowment was deemed sufficient to meet the needs of the school, and a clause in the charter stipulated that money could not be appropriated by the Legislature for building purposes. Funds received from that body are solely for the uses of maintenance. When the Agricultural and Mechanical College was established that clause was omitted from their charter and it has not been forced to suffer such deplorable poverty.

Revenue Small
For many years the only revenue accruing from the lands owned by the University was derived from grass rentals. The lands lying in the northern and western portions of the state were good grazing lands and were leased to cattlemen at a few cents per acre. Thus the longhorn cattle of Texas first contributed to the life of the University, their owners being able to see the relation between good grass and good education.

Things rocked along in this manner for many years, and had it not been for the generosity of alumni, Alma Mater might have wasted away for lack of sustenance. But by wise application of the scant funds, a little was made to go a long way and the building committee managed to meet the needs of the various schools so that the University was nourished and sent out many great educators, lawyers, doctors, engineers, and politicians.

An example of the spreading of funds to cover a large order was the means used to care for the students in the days of the World

War. Permanent buildings cost too much and the need for more room was imperative. Witness the ingenuity of the building committee. Almost overnight the Forty Acres was covered with wooden shacks!

Shack Struggles
For ten years these shacks were the scenes of student struggles with problems, theories and experiments. The wooden buildings lost their original neatness in the wear and tear of time. Their novelty wore off. The campus took on the dejected air of an abandoned construction camp. The situation required action—and lots of it.

Suddenly, the unfruitful lands that were set aside for the endowment of the University yielded a rich crop. Oil was discovered in 1923 in such quantities that it became the foregone conclusion of the laity that the University of Texas was the richest in the world. But it is one thing to have the reputation of being the world's wealthiest school, and quite something else to be possessed of money to uphold the reputation.

Oil flowed out and royalties flowed in at a rate to cause many people to wish that they owned the land. However, restrictions were found to limit the availability of these funds. An interpretation of the Texas constitution ruled that the royalties from oil on the University lands should constitute a permanent fund and only the interest would be made available for expenditure.

Hopes and Income Rise
This was trying on the building committee whose hopes had risen with the rising income. A magnificent building program was drafted to be spread out over a period of years so that the financing could be handled.

The first unit of the program is nearly complete. Like a monster milestone, the chimney of the new power plant rises 236 feet to mark the progress of the greater University.

Imposing in its proportions, the power plant is designed to meet the needs of the next fifty years of expansion. Its equipment sets a standard achieved by few industrial plants. It rises from near the center of the Greater Campus, from it will radiate the lines which will conduct heat and power to every building which houses the activities of the University.

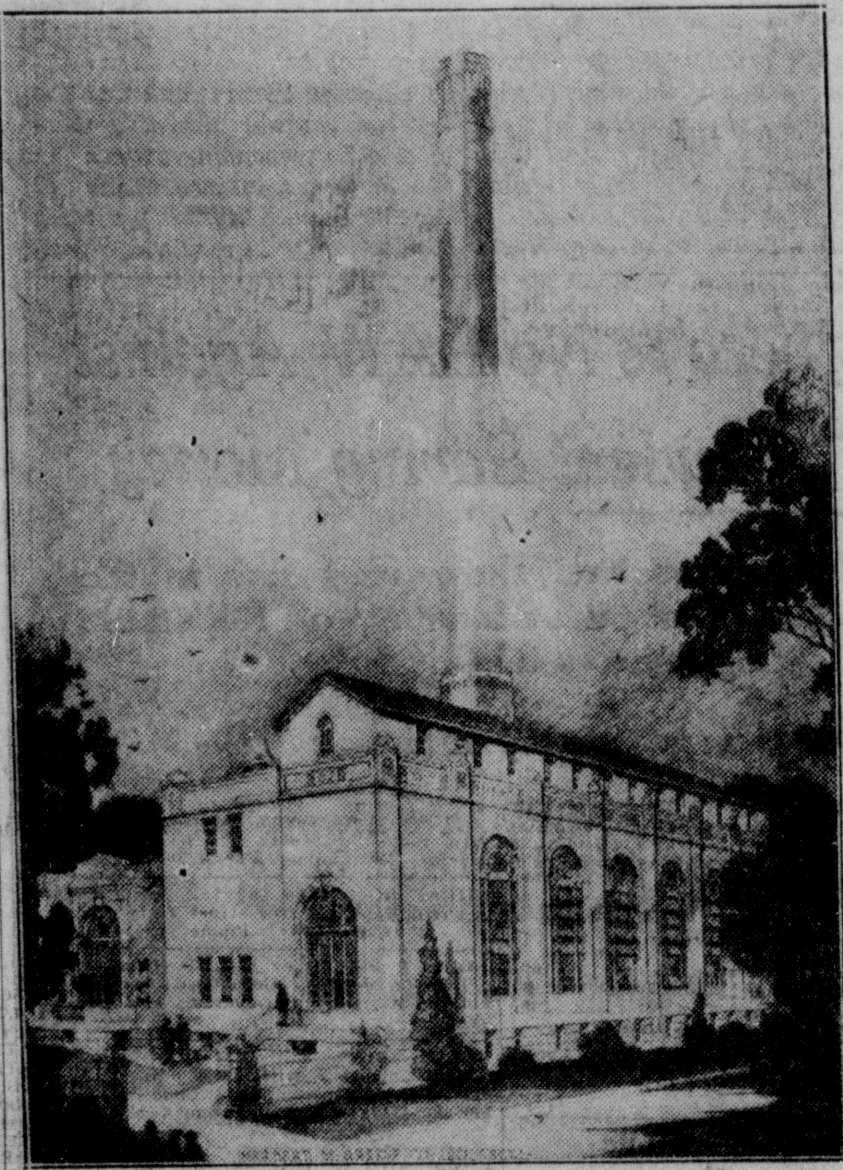

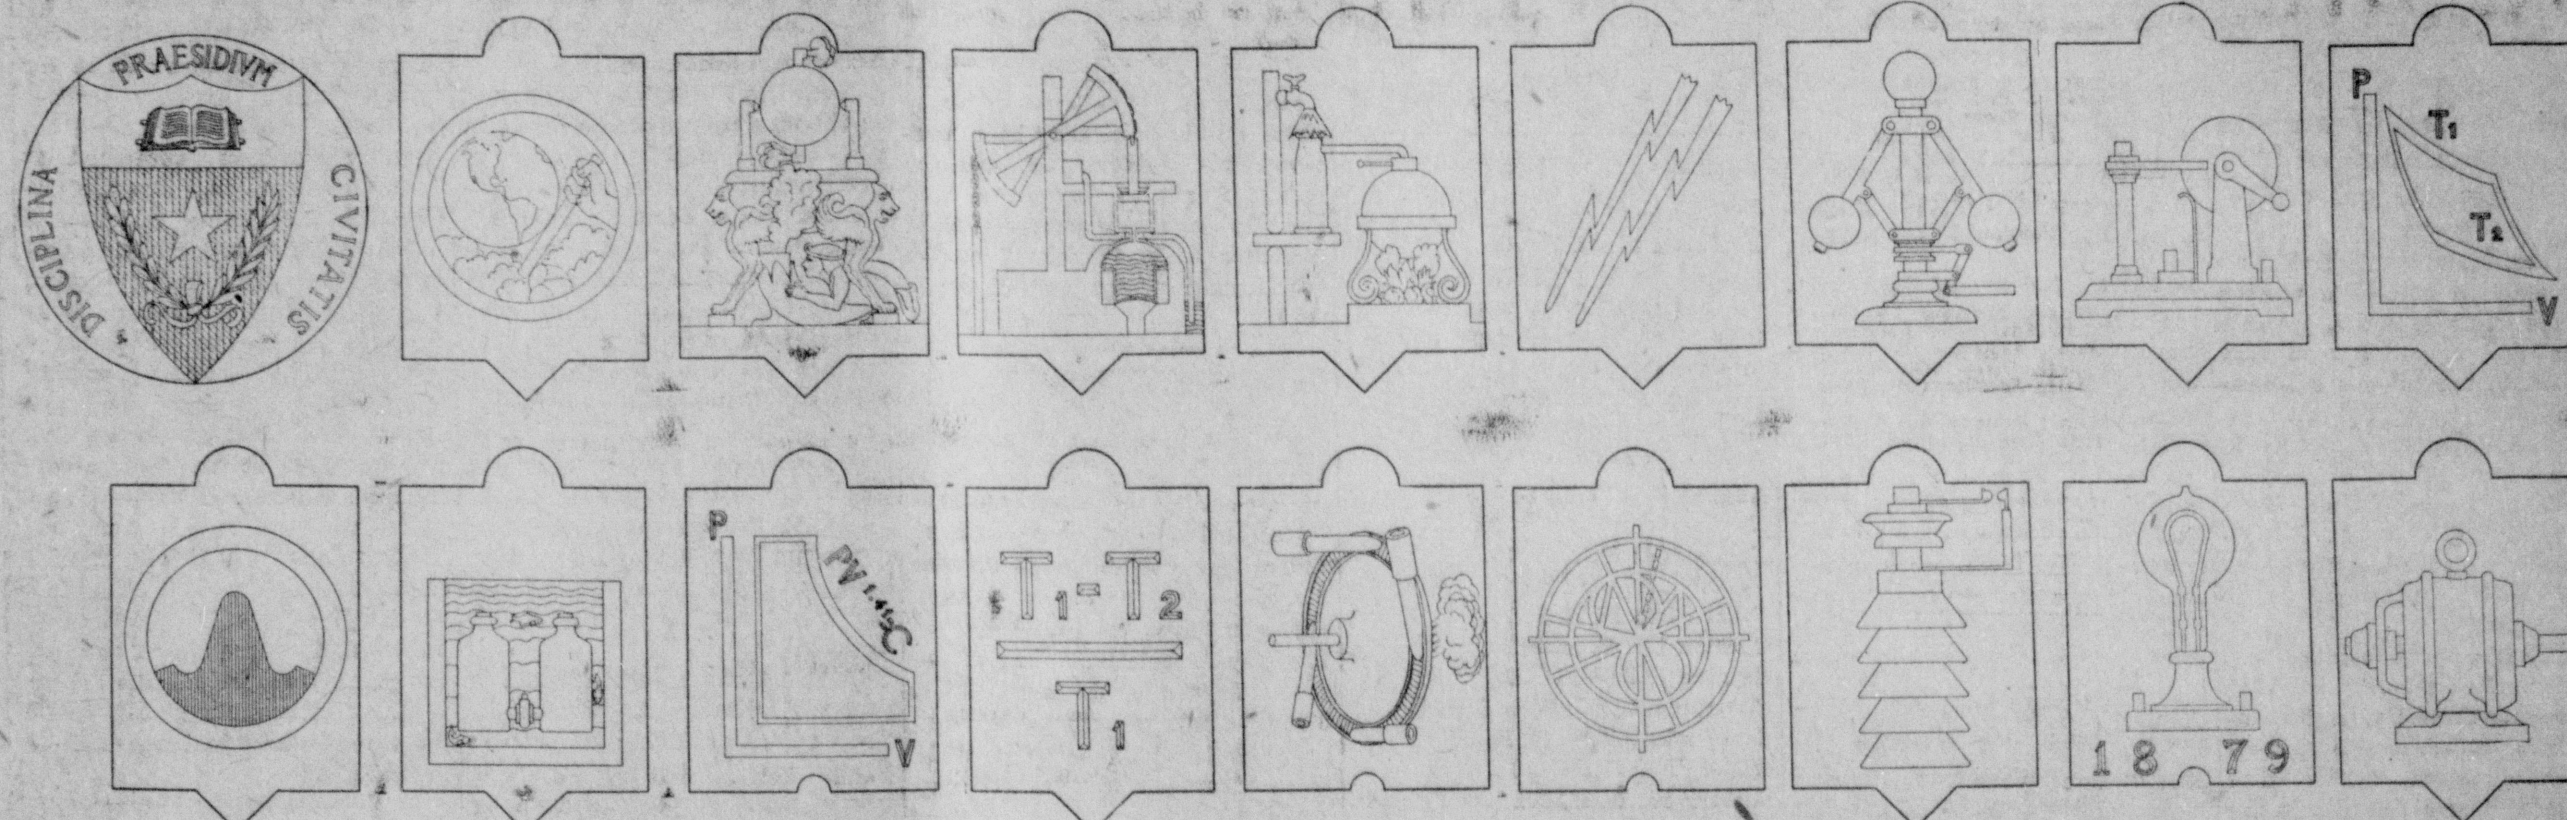

Computations of civic development are made on the basis of the development and growth of public utilities. In the same way that cities are estimated by their telephone and electrical installations, the University can be measured by the increase in the power it consumes.

Complete in March
The first unit of the power plant, which is to displace the one erected in 1910, then believed adequate for fifty years of growth, will be completed in March. It is interesting to note that its boiler capacity is to be as great as that of the plant that supplies power to the city of Austin.

It is to employ every ingenious feature of proved mechanical merit that the science of engineering has evolved. It will use Texas lignite for fuel in its five great boilers, and one man will feed them by machinery as easily as ten men with shovels could do the work.

From this power source all the buildings of the campus will be warmed. It will furnish heat to temper the showers of the athletes and cook the food at the commons. No detail of construction which would add to the efficiency of the plant has been overlooked. When the time comes, the plant can be enlarged to four times its present capacity.

Spanish Architecture
But aside from its utilitarian purposes, the new power plant is a distinct contribution to the architecture of the campus. The

building committee has set out to plan its construction program so that each new addition to the buildings of the University shall conform to a general architectural scheme. To that end they have adopted the style of the Spanish Renaissance as best expressing the traditions of Texas. A further idea is to have each building express in its architectural features the symbolic character of the unit which it houses.

Co-operating with this plan, George L. Dahl, architect, of the Herbert M. Greene Company of Dallas, architectural advisers to the University, has designed the power unit. He has worked with Professor Hal C. Weaver, professor of mechanical engineering in the University. Their results have met with much favorable comment among professional and industrial men for design and efficiency.

Frieze Attractive
The distinctive decorative feature of the building is a frieze depicting the march of mechanical progress from early times. Sixteen men were selected as having contributed most to the enslavement of power and the freeing of man from mechanical drudgery. The frieze extends entirely around the building and is carved with the names of the scientists. Beside each man's name is an ornamental tablet which bears the design of his discovery in symbolic form.

(Continued on page 6)

INCORPORATED in the new \$500,000 Power plant shown at the left are decorative features that are innovations in ornamental tablets. The frieze symbols, reading from left to right in order are representative of sixteen men who have been selected as the greatest contributors to the progress of engineering and science.

The first symbol represents the official seal of the University; the second, reading from the left on the first line above represents the Archimedian screw, devised by the most famous mathematician of antiquity (258-212 B. C.).

Next in order is in honor of Hero, mathematician and physicist, who invented the reaction type of steam turbine (first and second century B. C.); Newcomen, English inventor of the steam reciprocating engine, is the next honored (1663-1729); Savery, French inventor of the first steam pumping engine, follows Newcomen (1698). The others in order are: Franklin, American discoverer of electricity (1706-1790); Watt, Scottish engineer, inventor of the modern condensing steam engine and the fly-ball governor (1736-1819).

Faraday (1791-1867), English inventor of the dynamo; Carnot, (1796-1832) French founder of thermodynamics; Carliss (1817-188) American inventor of the Corliss valve gear for use in steam engines; Joule (1818-1889) English physicist who discovered the mechanical equivalent of heat in 1843; Rankine (1820-1872) Scottish engineer who developed the Rankine cycle, the cycle of the heat of the ideal heat engine; Clausius (1822-1888) German physicist, one of the founders of the science of thermodynamics.

De Laval (1845-1913) Swedish engineer who invented the first commercial steam turbine (1882). Zeuner (1828-1904) German who invented the value diagram for figuring valve action in 1856; Steinmetz (1865-1923) German developer of long distance transmission; Edison (1847-) inventor of the incandescent lamp, phonograph and the moving picture machine; Westinghouse (1846-1914) American inventor of the air brake.

Letters Reveal Story of Early Texas Colonies

Spanish Class Translates Historic Mexican Documents

The first installment of an English translation of letters written by Tadeo Ortiz de Ayala, a creole of Guadalajara and a man very much interested in the colonization of Texas during the period of 1822 to 1833, will be contained in the April issue of the Southwestern Historical Association Quarterly, according to Dr. E. C. Barker, professor of American history in the University and editor of the Quarterly.

Kelly Directs Translation
The translation is the work of about twenty-three University students, who translated the letters under the direction of Miss Edith Kelly, instructor in Spanish in the University. The documentary history has been revised and edited by Miss Kelly and Mrs. Mattie Austin Hatcher, archivist of the University.

The original papers or letters were copied several years ago from the archives of Mexico City where Dr. Barker and others from Texas were interested in gathering information relative to the Austin colonization of the state.

The students whose translations were used did the work as a part of their advanced Spanish. These students were F. L. Lombard, E. Lee Wyson, J. S. Bowen, L. C. Shropshire, Vernon Schawe, John Truett Patteson, Herndon Mabry, George Vick, Ted Weaver, Stanley Hornsby, Ola Tillery, Sam Glass, M. H. Rose, Sarah Thaxton, Velma Martin, Francis Burt, John Aldridge, H. A. Hodges, Elizabeth Griffin, Marshall Abernathy, Merritt Steger, Carey Thompson, Charles K. Devall, Jr.

Ortiz Active Colonizer
The untimely death of Ortiz put an end to what would have probably been a very powerful influence on the colonization of Texas, Mrs. Hatcher said. Ortiz had been very influential in the formation of the general colonization plans for Texas from the establishment of independence in his country until the time of his death in 1833. His ideals had been adopted and he had been made director of colonization in Texas when death overcame him. The significant interest which is felt in his translated letters lies in the realization of what Mexico might have accomplished in the way of colonizing the Texas region had Ortiz lived to see his plans carried out, Mrs. Hatcher said.

Texas Tech Summer School Opens June 4

LUBBOCK, Texas, Jan. 28.—Announcement is made that the 1928 summer school at Technological college will open June 4 and last until August 24. The summer session will consist of twelve weeks, divided into two terms of six weeks each. The first term will last from June 4 to July 14 and the second term from July 16 to August 24.

Work will be offered in all branches of the school of liberal arts, also courses in engineering, agriculture, and home economics. Special work in the science of education will be offered. In addition to the regular faculty there will be special instructors from the outside.

Officials state that all privileges in the matter of teachers' certificates that are accorded by the laws of Texas to standard Texas colleges, including the law passed by the last legislature concerning the extension of certificates, will be given those who attend the Tech summer session.

S.W. Endowment Drive Launched

Friends and Ex-Studes Contribute

Special to The Daily Texan.
GEORGETOWN, January 28.—"Southwestern's Living Endowment" was launched at a meeting of the ex-students of Southwestern University residing in Williamson county held here last night, when officers of the county unit were elected.

The living endowment idea, proposed by Pres. J. Sam Barcus, is that at least one thousand ex-student and friends give ten dollars each year to the maintenance fund of the University. It was enthusiastically endorsed by those present, most of whom signed a card promising to be one of the thousand. This maintenance fund will be equal to interest on \$200,000 endowment.

Supt. Harold Egger was chosen resident of the Williamson county ex-students. Mrs. Mabel Taylor Quebedeaux, vice president, and Sam V. Stone, secretary-treasurer. A constitution was adopted and plans for definite activity were outlined.

This organization of Georgetown and the county in which the University is located in the beginning of the campaign of perfecting local Southwestern ex-students' organizations throughout the state. Not only the living endowment idea, it was proposed, but other definite means of relating the old students to the college and to each other will be propagated from the home county chapter to other local units all over Texas.

Students Hear Health Lecture

Former U. T. Student Heads Physicial Ed at Southwestern

Special to The Daily Texan.
GEORGETOWN, Texas, Jan. 28.—Girls in Southwestern University who are taking courses in physical education this term were required to visit the Missouri Pacific Special Health Train, which stopped in Georgetown for several hours today.

Besides the physical education students, all those enrolled in the biology department were required to go through the train and hear the lecture given. The Better Health Train stayed in Georgetown until 2 in the afternoon, so many students were able to visit it.

Physical education for girls in Southwestern is in charge of Miss Rosemary Walling, M. A. graduate of the University of Texas, and the head of the biology department is Prof. J. B. Norman, formerly professor in Austin College, Sherman.

REDUCING REDUCED TO SIMPLE PROCESS AT C. I. A.

Special to The Daily Texan.
DENTON, Texas, Jan. 28.—Reducing, always a thorn in the side of students of the College of Industrial Arts, is now a simple matter; optional meals have solved the difficulty.

No matter how strong was the resolve not to indulge in too many calories, one had to succumb when made to attend meals. It was impossible to sit placidly watching the whole table openly enjoy a cream puff or a huge bowl of ice cream. But with the passing of the rule making breakfast and lunch optional, she of the rotund figure and weak will, can sleep through breakfast and walk during lunch.

Simmons Gives New Course in Insurance

A new course in insurance will be offered by Prof. C. D. Simmons in the School of Business Administration. This is the first time that a course like this has ever been offered in the University. The class will meet at 12 o'clock on Tuesday and Thursday and will pertain to the protection of life value and the methods of building up a personal estate by insurance. The course will count two semester hours of University work.

THE WEATHER

Sunday: Fair, with rising temperature.

TEXAS TECH GETS NATIONAL GUARD UNIT

Special to The Daily Texan.
LUBBOCK, Texas, January 28.—A unit of the National Guard has been established here with its membership to be recruited from the ranks of students of Texas Technological college. Sixty-eight men have already been mustered into service. It will be quite an aid to students who need to work for part of their expenses while in school, as the government equips and pays the men.

TECH COW AVERAGES

TEN GALLONS PER DAY
LUBBOCK, Texas, January 28.—Prof. W. L. Stangel of the school of agriculture of Texas Technological college has had seven of the college holstein cows on test for the past several months by representatives of the Advanced Registry Association. One of the cows has produced more than 5,000 pounds of milk in the last two months, this being a little more than ten gallons per day average.

\$500,000 Power—

(Continued from page 5)

achievements of Hero of Alexandria, the first experimenter with steam engines, who lived in Egypt in the first century B. C. Contrary to general opinion, the knowledge of the existence of energy in steam is not recent. But the fact that it was formerly associated with the mythical demons is shown by the design of Hero's engine which resembles a weird monster spouting steam from its nostrils. Beside Hero the frieze bears the names of two Englishmen, Newcomen and Savery, who also experimented with steam and who made the first noteworthy application of its power. They were neighbors and their adaptation of steam to engines and pumps in the seventeenth century revolutionized the coal mining industry. Benjamin Franklin, versatile American, who found time from diplomatic and journalistic duties to experiment with lightning, is credited with the discovery of static electricity.

English Represented

The next name on the frieze is that of James Watt, the Englishman who improved on earlier steam engines and invented the fly-ball governor, still used to produce an even flow of power.

Perhaps the most important mechanical contribution since man discovered the wheel is that of Michael Faraday, an Englishman, who, by his discovery of the relation of magnetism and electricity, made it possible to turn the wheels of industry by electric power.

He is followed by Sadi Carnot, the Frenchman, whose theoretically

perfect engine Henry Ford may eventually construct.

Over the north facade a panel bears the names of George Corliss, American inventor, who perfected many devices to make the steam engine more efficient.

The west frieze bears the names of the Englishman, Joule, who distinguished himself in physics by determining the mechanical equivalent of heat; Rankine, a Scotchman, who formulated the ideal steam engine; and the two Germans, Clausius and Zeuner, who worked in the last century on heat engines and value construction.

De Laval, of Sweden, besides inventing the cream separator, made spectacular contributions to mechanics in the turbines.

Air Brake Inventor

George Westinghouse, an American, made railways faster and safer by his invention of air brakes.

The last name on the frieze is that of Edison, the Wizard of Orange, whose ingenuity evolved the phonograph, the movies, a new type of storage battery, and among a host of other inventions, the well known incandescent lamp.

Such are the men to whose efforts the new building is a monument; not one of them but has his principles and discoveries at work beneath its roof; not one of them but would take pride in having had a part in its fashioning.

James T. Taylor of Fort Worth

is general contractor for the plant. He has also been awarded the contract for the new Clark Field stands to be erected this spring at a cost of \$55,000. They will afford the University of Texas one of the best baseball fields in the South.

Other Buildings Planned

Other buildings projected, or under construction, are the mechanical engineering laboratories to be completed in March at a cost of \$58,000; the library annex, for which plans are drawn, to be erected next year at an estimated cost of \$500,000; and the largest and most modern chemistry laboratories on any campus in the United States, to be erected year after next at a cost of \$800,000.

According to one eminent authority, a man whose long and intimate association with the University places him in a position to know, and whose judgment is everywhere respected, the University of Texas can rightly claim the title "richest in the world—potentially."

Predicts Bright Future

He predicts that the next 25 years will see a vast development in Texas of her untouched natural resources; that Mexico will undergo a similar change; and that the development will inevitably stimulate a corresponding growth in education and in institutions of learning. Such a situation finds the University in a strategic position.

tion. Its location will attract great numbers of students. It is undergoing a radical change.

And with a glow of pride, he says, "Already the greatest University in the South, the next quarter of a century will see the University of Texas one of the greatest centers of learning in the world."

Courteous Service T. H. Williams & Co. Dependable Quality

New Spring Hats Have Arrived

And they are lovely, too. Each one introducing a subtle new note of transition, from Winter to glorious Spring. The designers have done wonderful things with the lovely new pliable straws, and the trimming touches are new and different. There is a variety of new models from which to choose—each one more youthfully becoming than the other. Be among the first to wear one of these chic chapeaux.

All Are Latest Creations, of Straw, Silks, Felts and Straw Combinations. All New Spring Colors. Price Range—

\$5.95 to \$16.50
