

May 30, 1952

Dear Henryk:

At long last Tsch has picked a chairman for the Geology Dept..

They drew a man from their own ranks, Bob Sharp, who is a Tsch graduate and took his Ph.D. at Harvard, I believe. His rep is in glaciology. The guy should be O.K.

I had feared Brown would take over. Of course he may in a few years anyway. I think Sharp was willing he do so, but some of the others were not.

Without counting I would guess fifty replies came in to the P.S. questionnaire. Will have to digest them and send them on, also write the junk up. Replies were good, bad & indifferent as might be expected. The most interesting thing is the ones who did not reply.

Kind of woozy at the moment. Doc gave me big shot of penicillin yesterday for my back and something to stop my head running. Slept lying down for a change, but don't feel rejuvenated, so won't run the species factory hard today.

Best wishes,
Mike
