Dear Dr. Stenzel,

Thank you for your letter of the 29th. I have your reports but cannot find what I want in reference to Mytilus. We are trying to get an analysis of these crystals. Probably aragonite as are those already described. We will have some very interesting reports on shell formation structure and mineralization of the ligament for Mytilus this year I hope.

I am busier than ever teaching writing and researching. I hope I can be as productive as you are when I retire. Best wishes for your health and completion of your opus

Sincerely

G. Bevelander
