

Oglesby, Texas
20 March 1964

Dear Dr. Stenzel:

Thanks for your letter of the 9th inst., was very glad to hear from you. In regards to the location of the Venericardia's. It is 2 miles South of Stranger Texas at the intersection of this FM road with HW 7, in Highway pits either side of road., Falls County Tex. When I get back to shipping again I will send you some halves of Ostrea Travisana or would you like to have a shell already open with both halves fitting? Do you have any Ostrea Cremulimarginata Vaughn, these are very scarce and are very fragile, Eocene, very white but I can get you some if would like. How about Graphaea Wratheri or Graphaea Corrugata?

Would you kindly tell me again the locality around Beaumont of the Miocene Fossils as near as you can? Let me hear from you again soon. I am.

Sincerely yours,

C.D. Homan
