*ask him for a copy  
of Coon Creek Cret. fossils*

April 8, 1950

Dear Dr. Stenzel:

Recently during a visit to my brothers home in Rochester N.Y. I had a chance to check on a set of kodachrome duplicates which I had requested made from some pictures taken on the Choctaw ,Ala. field trip and on an earlier trip to Texas. Part of the request for duplicates included two pictures which I believe that you would like copies of. One shows the borings in the Yegua exposed at Montgomery Landing in La. The other is nothing more than a group picture taken during our field trip to Choctaw Co.

The Choctaw report is now in the mill and I am in Washington to get it moving along. My assignment here is to last until about the end of June. My job is reviewing reports coming into the Ground Water Branch office for approval by the Director.

Next summer Lyman and I hope to get back at our work in Wilcox county Ala. which is our next project. I haven't seen Mac or Cooke since I've been up here but hope to get over to the Museum one of these days soon.

Let me know if I can run any errands up here for you.

Sincerely yours

*Phil R. Moore*
