Dear Emmett,

You will probably have received by now a copy of Brommings' Knossos transcriptions for the London seminar. On the whole it looks a very useful basis (especially in arranging all the tablets in your prefix order); but I have noticed a certain number of mistakes. These don't represent my readings, and in fact I didn't check the cards through myself in their final form.

I've suggested to Turner that an appendix of errata & emendations is got together towards the end of the year. I will try & capture all the mistakes which are checkable from Scripta Minora II. Your notes on things wrong in the 5— series especially would be valuable, but of course we don't want to put more work on you.  
Yours Michael
