DEPARTMENT OF CLASSICS

11 Sept. 64

Dear Emmett

Here are some better prints.
With the bulla — or whatever it is
(no hole through it) — is a plasticene
mould of the indentation on the edge.

I doubt if the "poles" were of bamboo.
Their diameter was av. 7 cm. Some
larger. Unlikely that any Aegean
Kalamia were so big, isn't it?
You might ask Martha (address
Thetford Center, Vt.).

I'm to give one of those
Baltimore lectures, 5 Oct, on
pre-Myc. things. If you are
dealing with the sealing I'll
lay off. But shall mention the
House of the Tiles in passing.

Yours,

Jack
