

1906 Ferdinand Street,  
Coral Gables, Florida  
Oct. 12, 1963.

Dear Dr. Stenzel.

Enclosed are some prints of the oyster which I photographed for you in Washington. They were printed above natural size to show the finger-print markings better.

Alectryonella plicatella Gmelin  
Yap Is. Carlinia Ids. USNM. 591237  
C. G. Johnson  
Length of specimen 57 mm.

The prints can be retouched as sharpening the outlines etc. if you first rub the surface with a soft eraser so that it will take the marks of a pencil.

If you care for the negatives, I will send them to you.

Withbest regards,

Sincerely
