

April 29, 1949

Dr. Lloyd W. Staples
Department of Geology
University of Oregon
Eugene, Oregon

Dear Dr. Staples:

Your letter of April 19 has been received, and accordingly there is being sent to you silicified wood with pseudomoss from the Yegua formation of Brazos County, Texas, by separate mail. You may chip or saw portions of this specimen to obtain whatever thin section or other samples you might need for identification. Naturally I would appreciate having the bulk of the material returned.

About the British Museum specimen I know nothing more than that I saw it on exhibit with that label. Perhaps you could write to the Curator of Mineralogy of the British Museum of Natural History, Cromwell Road, London SW7, England.

At one time I had additional material from Brazos County in the collection but it seems that it has disappeared.

I am looking forward to hearing about your results and to meeting you at the next year's G.S.A. meeting in Texas.

Sincerely yours,

H. B. Stenzel
Geologist
