Mr. A. K. Miller  
The State University of Iowa  
Department of Geology  
Iowa City, Iowa

Dear Mr. Miller:

By express there is being sent to you the type specimens of Deltoidonautilus ellioti. The hollow type is rather brittle and I have some misgivings about sending it out. However, it has always been my contention that type specimens are there to be studied and not to be preserved as dead pieces in a museum. I hope they prove useful to you.

Sincerely yours,

H. B. Stensel, Geologist

HBS:BF

P.S. Please return two copies of the enclosed receipt to us.
