

ATLANTA, Dec. 20, 1958

Dear Emmett:

A year or so ago I wrote to you that I urgently needed a concordance for the tablets of 1957. You replied that you had two copies and would send me one. When I reminded you of this a long time later you answered that you had not yet been able to type the concordance.

Is it the one I made in the fall & ~~winter~~ Spring of 1957-3 in the National Museum? I believe I turned that over to you. Anyhow it needn't be typed.

I need the concordance right away for Beatty, more badly than ever, is on the warpath and has thought up all sorts of ridiculous hypotheses: thinks Ta 641 was found long before June 4, 1957 and was somehow known to Ventris. B. thinks I am mistaken in believing I found it on June 4, 1957 - I, I believe, was the right hand part of Ta 641. Is that correct? What is the 1957 number at the beginning of the tablets for there were more than two pieces in all? Please send me this information as quickly as I need it - now. Also the whole concordance. I need that, too.

Beaucher is also much concerned because he believes he has discovered a discrepancy of 200 tablets in the 1939 lot. In Order Tablets it we should have explained about the numbering of Tablets 1000 to 1173. Perhaps you did somewhere?

With best wishes

Yours

Carl W. Ho.
