Dr. Charles W. Johnson
Boston Society of Natural History
Boston, Mass.

Dear Dr. Johnson:

I read recently a notice that you are forming a Conchological Society or the like. Just what are the purposes of this society? I am much interested in mollusca from a palaeontological side of view.

I might add that I have been collecting at some of the places in the Tertiary of Texas you once made a collection from. Many of the rare species you described in 1899 and 1902 in the Proc. Phila. Ac. Sci. are in my collection. However I have never been able to recognize *Fusus perobliquus* which is not figured. It is a pity that these Tertiary fossils are not accessible to us here in Texas.

Very truly yours

H. B. Stenzel.
