Dr. H. B. Stenzel, Geologist
University of Texas
Bureau of Economic Geology
University Station
Box B
Austin, 12, Texas

Dear Dr. Stenzel:

In reply to your letter of November 25th to our Mr. Steen concerning Jackson fossil determinations from South Texas, we wish to advise that our requirements would probably not exceed fifteen to twenty samples per month. This is just an approximate estimate, but we feel that our requirements would not exceed more than twenty-five determinations per month and possibly an average of fifteen. We believe that this work could probably be done in your spare time without any interference to your regular work with the bureau.

Yours very truly,

G. T. Buskirk
