Professor Dan Stanislawski
#107 Tamalpais Road
Berkeley, California

Dear Professor Stanislawski:

The name of the oyster is Crassostrea angulata (Lamarck, 1819). It is found off Portugal and Spain and transplanted as far north as England. The name Gryphaea was used very often but erroneously for this species and should be avoided in this case.

Dr. Stohler is a remarkable man. I admire the way he works so hard to build up that new serial, the Veliger. He has had good success in improving it. It was a pleasure to meet him on my recent stay in California.

Yes, I am the same Stenzel who was Professor of Geology at the University of Texas and remember you very well indeed. It was enjoyable to talk to you and to analyze the origins of our two family names. I am now connected with Shell Research and enjoy the place very much, much more than I ever did my various connections with academic institutions.

With best personal regards,

Sincerely,

H. B. Stenzel
