August the thirtieth
 Nineteen hundred thirty-seven

Mr. H. B. Stenzel, Supervisor
 Geology Division
 University Centennial Exposition
 The University of Texas
 Austin, Texas.

Dear Mr. Stenzel:

Among the unanswered letters turned over to me in June by my colleague Barnum Brown was one from you, under date of October 6, 1936. It seems about time that this letter was at least acknowledged! I am sure that Brown will be interested to learn just how complete your Mosasaur specimen proved to be.

You ask in your letter for suggestions regarding someone to describe the skeleton. The one man who comes to mind is E. C. Case of the University of Michigan. He is distinctly a reptile man and one interested in the fossil reptiles of Texas and Oklahoma especially. Perhaps, though, that so much time has passed since last October you have already made arrangements for the description of your specimen.

Brown has been engaged this summer in an exploration of the Mesa Verde beds at Rock Springs, Wyoming. He reports some well preserved dinosaurs of new undescribed genera.

Very sincerely yours,

Walter Granger
