Dear Henryk:

As a separate parcel I am sending a few bags of oysters that I was able to collect on a recent field trip.

One locality (T63-8) is 6 miles south of Drazinda on the east side of the northern part of the Suleiman Range, roughly, 70° E long., 32° N lat. The oysters occur in a 40 ft. bed in the upper part of the "Lower Chocolate shale" of Late Eocene age.

The other locality (T63-16) is near Zam Tower, east side of northern part of Suleiman Range, approximately ~~same~~^{the} coordinates, and stratigraphic position.

Your identification of the species as well as any other information will be welcome.

With best wishes,

Sincerely yours

Curt Teichert
