

7 Aug. '61

Dr. Stenzel,

Returned to Austin on 2 Aug.
Fairly successful summer. Found
some interesting specimens as well
as disagreements with one of the
guide books.

Would like to come down to see
you about Aug 16 or 17, if it is
convenient for you -

I found Alabama Gosport localities
fascinating, but somewhat hard to
work - I've been thinking of using
a boat for a while next year -

Have some specimens (Pelecypoda)
with what I think is original color,
not just coloration traces, but the
true color - Also have some ideas on
reinforcing your burrowed surface
as good evidence of a transgress-
ive unconformity -

Very sincerely,

Walt Suter
