CHARLOTTENLUND, d. June 15, 1957.

Professor dr. H.B.STENZEL  
3726 Colquitt  
Houston 6, Texas.

Dear professor Stenzel,

I thank you very much for your kind letter of April 25, and for the copy of the paper by you, Krause, and Twining: Pelecypoda from the Type Locality of the Stone City Beds (Middle Eocene) of Texas, which I received some time ago.

I am very grateful to you for remembering my interest in our Tertiary. Incidentally I finished a rather big manuscript on molluscs from our Miocene at Christmas last year. It will be sent to print as soon as possible, however, I think the printing of it will take about one year.

I am very sorry on account of your heart attack. One good thing in such a case is, that you are forced to run slower and to live more sensible. In doing so you have a chance to recover completely and to resume your work.

And that is what I wish for you after having seen your last publication, which looks advanced to me. You have followed a similar approach as I have in the manuscript I mentioned. I will, therefore, send you and your cooperators a copy of my paper as soon as it is available, since I do not think there are many people in the world who are really interested in our subject.

With my best and kindest regards,

*Sincerely yours  
Theodor Sorgenfrei*
