

UNIVERSITY OF WISCONSIN
MADISON 6

DEPARTMENT OF GEOLOGY

October 16, 1946-

Dear Dr. Stenzel-

The mad whirl of the first weeks of school are over, and I have time to draw my breath and take you away from the more important things that you have in front of you -

I am enrolled in school, teaching $9\frac{1}{2}$ hours a week -- which includes 8 hours of micropaleontology lab - and homeless. Due to the latter state, I am taking my wife back to Tulsa to live until I can dig us up a place to live - We have been living in tourist cabins for the past six weeks.

Enclosed are some prints I have of the Smithville outcrop. I have the negatives of these pictures here in Madison, the pictures were used in my thesis, and as I recall you have a copy of it. We discussed the possibility of you being able to use these pictures in your paper on the bleches at Smithville - If you would like to have bigger enlargements of any of these just let me know. If these can be of any help to you, I will be glad to either furnish the negatives or prints to you as you see fit -

I have only given the S. D. Creek samples a hasty examination, but they do not seem to be as fossiliferous as the material you collected from

the last exposure on J. D. Creek (Bed E). As I recall, this is the exposure that was covered with water this ~~same~~ September when we were on J. D. Creek. I will inform you as to what my detailed examination shows—

Again I want to thank you for all your kindness while I was in Austin, both in the field work and my problems concerning the completion of my college work—

Sincerely yours—

Dan Teray
