Mr. Roy T. Hazard  
Gulf Refining Co. of Louisiana  
Shreveport, Louisiana

Dear Sir:

Mr. Israelky collected a crab from supposed Marianna limestone southeast of Jackson, Mississippi, on occasion of the ninth field trip of the Shreveport Geological Society. It was found at the station with the speedometer reading 26.4. Unfortunately I do not have the guidebook and am therefore unable to check the locality. Could you please give me an exact description of the locality and if possible the name of the formation in which this specimen was found because I want to publish it.

Is it in any way possible to obtain a copy of the guidebook? Is perhaps a reprint of it contemplated?

With many thanks,

Very sincerely yours,

H. B. Stenzel, Geologist
