

20. 3. 51

13. Canterbury Road - Oxford.

Dear Dr. Bennett,

I have a message from Mr. Platon at  
Cambridge today, that "the phototypes of Dr. Bennett's work on the  
tablets have arrived, but Nos 10 and 11 are missing" - I do  
not know to what photographs this refers, for I think you  
gave him the phototypes of the vocabulary personally;  
and I have sent him nothing else. Perhaps you can  
supply what he needs.

I have been checking your Papyrus vocabulary with  
Knauss, and am much interested to see how many names

and roots of names recur.

But what a labour it is,  
to have the signs in two - indeed three - 'alphabets'!

Dr. Christian Zuntz, of the University of Manchester, prints in  
Museum Helveticum 8.1: p. 12-25. 1951. a paper On the Etymology  
of the Name 'Sappho', in which he discusses phonetic values for  $\eta$   
and similar signs. Apparently the lady spell her name in her  
own way, like Celia Finnes.

With all good wishes. Yours sincerely,

John K. Myers
