Pasadena Calif

Dear Henryk:

I am delighted to hear from you.

The particular oyster just hatched.

It gets hot here too but it is generally dry heat so we go on drawing. The buildings are not air conditioned, but air is blown through water (desert style) and cools it off a few degrees but adds to the humidity. But it's better than Houston.

The Plummer-Lonsdale debacle is unfortunate indeed. I would rather her specimens were in the Nat. Mus. than at Lillaea.

Remember Mt. Enterprise rather vividly. Spoon kept bringing in very red greensand. I finally rebelled at looking at the highly weathered stuff but he begged for one more look and there was Sanarekina eldibornensis, and substantiation of a fault. One never knows.

Am sorry you must part with Leah but you can be proud of her. I am afraid my kids are such a mixture of races the high lights of all of them are lost. Guess mixed breeding can be overdone. I am thankful they keep out of trouble.

Have heard no rumors of Muller leaving Stanford.

How about the opening at Texas Tech at Lubbock. My scuttle-butt sounded like they would pay very well.

We dropped ferry at Camp Roberts a week ago Sunday and kept going on to San Francisco by way of Yosemite. It's quite a hole but I am stratigraphically biased in favor of Grand Canyon.

Best wishes,

P.S. Joe Graham's sterling efforts have been rewarded. He is now an Associate Professor.
