Dear Boy Friend :

I am very glad to have your second letter of July 25. I am glad to know that you are doing all right. Today I just want to let you know that we are putting out the Damon Mound limestone report as a Mineral Resource Circular. Copy of it is enclosed. The enlarged report, that is, not as abbreviated as the circular, will be published in our resources bulletin. The drawings are almost finished except for slight changes.

Your work must be highly interesting and diversified in spite of all the hard work. You may be right in most of your identifications of formations as the camp is located just about where the Weches goes through. It would be interesting to know whether there is more Glover sandstone that we know so far. Possibly there are quite a few lentils of that sandstone in the basin.

With best regards,

Sincerely yours,

H. B. Stenzel
