AIR MAIL

Dr. Robert Lagaij
Doormanlaan 46
Wassenaar, Netherlands

Dear Robert:

Enclosed are two bryozoa samples:

(1) Lower part of Weches Formation (Tyus Member) from locality 145-T-37 on Centerville-Concord Road, Leon County, Texas. Bryozoan colony growing on Dirocerithium wechesense Stenzel (see Woodring, W.P., 1959, U. S. Geol. Survey Prof. Paper 306-B, p. 175). For locality see Stenzel, 1939, Geology of Leon County, Texas: Univ. Texas Publication 3818. Collected by Stenzel, April 11, 1964.

(2) Bryozoa growing on Serpulid tubes, which in turn are on Inoceramus shell fragments; Eagle Ford Group, Arcadia Park Formation near Arcadia Park, Dallas County, Texas. Collected by Mrs. Gerry Kienzlen.

I hope you and your family are doing well and give them my best regards. The work on the oysters is still going ahead. However, lately I have had many other duties to perform here and have not been able to do much on the oysters. It was all very interesting and satisfactory. Best wishes.

Sincerely yours,

H. B. Stenzel
