Mr. H. B. Stengel  
3726 Colquitt  
Houston, Texas

Dear Mr. Stenzel:

Being a student of paleontology, I am very interested in the crustacea of the Texas Cretaceous. While reading some of the old publications, I came across your name in connection with the crustacea. I obtained your address from the Arlington State College.

I would appreciate it very much if you could help me locate some data pertinent to my problem. I am attempting to identify the specimens in my collection. I have collected from the Eagleford, Weno, Paw Paw, Ft. Worth, Mainstreet, and Woodbine formations. I have a small collection of crustacea that covers the entire range of these formations. I have several very fine specimens. One of these is a large crab from the Ft. Worth formation that measures 8" by 5" across the back. I have one complete leg from this specimen and several other pieces of appendages.

I have searched all of the available publications and to date I have almost nothing to work with. I would certainly feel honored if you could spare enough of your time to help me with my problem.

Sincerely yours,

*Edward Davidson*
