Dr. G. Robert Lutz, Jr.
The Charleston Museum
Charleston 16, South Carolina

Dear Dr. Lutz :

The leaflets "Notes on Callinassa Major Say" and "Anthidae (Mud Crabs) of the Carolinas" arrived recently and I want to thank you for your kindness in sending me these two. I am indeed very much interested in your descriptions of the burrows of Callinassa major. Similar burrows occur fossilized, and I had guessed that they were Callinassa burrows because of the abundance of Callinassa chelae associated in the same bed. Your descriptions of burrows are very interesting. I wish there were more descriptions of such seashore animal burrows so that we paleontologists could identify some of the enigmatic burrows which we find fossilized.

Very sincerely yours,

H. B. Stenzel, Geologist
