Mrs. Katherine Van Winkle Palmer
Paleontological Research Institution
26 Kelvin Place
Ithaca, New York

Dear Mrs. Palmer :

By separate mail I am sending you not figured syntypes of two species of Turritella about which I had written you previously. This is a belated Christmas present. I thought it would go safer after the Christmas rush. I would have liked to send you complimentary copy of the fossil card catalog but there are no author's copies available due to the fact that it is a rather expensive undertaking.

Recently we ran across a statement in Miss Maury's paper on the Oligocene that indicates you may have Veath's original collection from near Burkeville, Newton County, Texas. This collection includes casts of invertebrates, possibly with Potamides matsui Dall. I would appreciate it greatly if you could locate that collection and let me know about its status.

With best wishes,

Sincerely yours,

H. B. Stenzel
