

THE UNIVERSITY OF TEXAS  
AUSTIN

June 4, 1931

Dr. H. B. Stenzel,  
Department of Geology,  
A. & M. College,  
College Station, Texas.

My dear Dr. Stenzel :

I have been delayed in replying to your letter of May 24 on account of my absence from Austin.

With regard to cooperation in your proposed studies. The Bureau of Economic Geology, as you know, is much interested in this project and is prepared to extend any help that may be possible during the time it is in progress.

In my letter to Dr. Keith recommending the project and your undertaking it I wrote as follows:

"In connection with grants, I presume the question of probable publication is of importance. It is not possible for the Bureau of Economic Geology to guarantee publication on a piece of work to be completed some years hence. In this connection it would be possible only to say that there is a possibility of publication being available through the Bureau of Economic Geology of The University of Texas."

I trust that this grant may be made and that you may in this way carry forward this important work.

Very sincerely yours,

E. H. Sellards, Associate Director,  
Bureau of Economic Geology.
