Mr. S. A. Lynch
Geology Department
A. & M. College
College Station, Texas

Dear Mr. Lynch:

It is time to do some advanced planning for the Tertiary field course. Mr. Deen explained to me that it will be held with A. and M. College as a base. I wonder what equipment is available at A. & M. that could be used in this course. I have in mind particularly instruments such as alidades, planetables, stadia rods, altimeters and the like, and photographic aerial maps of Brazos County and southern Robertson County. Mr. Deen thinks that this department here should in any case order photographic aerial maps for this purpose even if there are some at A. & M. However, if you have maps of that kind, we will probably want to order a set at a different scale, therefore the coverage and the scale of these maps is a determining factor in our order.

With best regards,

Sincerely yours,

H. B. Stenzel
Geologist
