WHOLE COMMUNITIES WHOLE HEALTH

A UT Grand Challenge

You are invited to attend:

Social and Environmental Determinants of Health: Science, Public Health, and Advocacy

As part of the Bridging Barriers Research Grand Challenges Initiative, Whole Communities—Whole Health is an interdisciplinary research team tasked with rethinking the way science helps society thrive. By engaging community members at each stage of the research process—from study design, to sharing technology and data with study participants in real time, to developing long-term relationships with community leaders—we hope to bridge the gap between science and real-world change. What strategies are available for getting information to families and organizations “on the ground” who can best put it to use? How can scientists promote advocacy? To explore these questions, Whole Communities—Whole Health presents a day of panel sessions focused on social and environmental issues impacting the health our local communities.

Please join us for a discussion between scholars and advocates!

WEDNESDAY, APRIL 24, 2019

8:30 AM - 4:00 PM

Glickman Conference Center

(Sherri and Robert L. Patton Hall [RLP], Room 1.302E)

305 E 23rd St
